

ABSTRACT

An audit system is provided, capable for auditor of performing a preliminary audit of an ISO compliant management system via a network or the like, without actually going to the system site, and offers an enhanced audit content and a shorter

5 audit period by subsequently performing an efficient site audit. The audit system accesses a electronic system for audit via a communication device such as the Internet, audits the system for examination based on the required information sent from the system for examination, and then based on these results performs an efficient site audit.
